HOW TO USE BAGS AND CONTAINERS

Paper and cardboard

Weekly night collection from April to September, fortnightly day collection from October to March

No special container is provided to collect paper and cardboard to households as these materials can be placed loose or fastened together with tape or twine or in disposable boxes or, where appropriate, in user's containers such as plastic or wooden cases, buckets, baskets, etc. These will be emptied and placed back in the collection point by service operators.

Plastic packages and tins

Weekly night collection from April to September, fortnightly day collection from October to March

To be placed in the dedicated yellow bags/bins trying to minimize the package volume. In case the user runs out of yellow bags before next yearly provision, neutral transparent bags having a volume similar to CLARA-marked bags can be used.

Non-recyclable waste

Weekly night collection from April to September, daily collection from October to March

To be placed in the grey bin for resident households inside bags supplied by the user. Non-resident households will use only the given CLARA-marked grey bags.

Mowing residues, leaves, small pruning

Variable scheduling of collection according to the season, always day collection

To be placed in the rollaway green bin. Vegetable waste and material will be placed loose inside the bin. No bags are required. Up to 4 bundles a time (max 1-m length) can be collected.

Note: Users who choose home composting and therefore submit a request for rate reductions can ask door-to-door collection only for bundles (max 4 each collection). Mowing residues, leaves and other green waste materials will not be collected, therefore users will not be given a rollaway bin.

Wet organic waste

Kerbside collection

The under sink vented waste bin has to be used only indoor complete with compostable bags (delivered by CLARA or provided by the user including the shopping bags supplied by most shops and supermarkets and bags for fruit and vegetables). Wet organic waste will be collected in the dedicated brown dustbin.

Note : Users who choose home composting and therefore submit a request for rate reductions will not be given the wet organic waste kit. .

HYGIENE OF CONTAINERS

Container washing has to be performed **by the user**.
